EDUCATION

Bachelor of Science in Computer Science

June 2027

Oregon State University, Corvallis, OR

- **Relevant Coursework** - Operating Systems, Data Structures, Intro to Databases, Analysis of Algorithms

SKILLS/ABILITIES

- **Programming Languages:** Python, C/C++, JavaScript, REACT, SQL
- **Libraries/Tools:** NumPy, Pandas, Matplotlib, Git
- **Strengths:** Great problem-solving skills, analytical thinker, fast learner

EXPERIENCE

Library Collection Maintenance Student Assistant

Mar. 2025 - Present

Oregon State University, Corvallis, OR

- Maintained library integrity by managing collection maintenance and shelf-reading protocols to ensure 100% accuracy in resource placement.
- Utilized the Library of Congress Classification System to process and shelve high volumes of incoming materials with 100% accuracy and efficiency.
- Contributed to a high-functioning team environment by proactively addressing shifting priorities and supporting colleagues in maintaining library standards.

PROJECTS

EcoRoute | Lead Backend Developer

Jan. 2026 - Mar. 2026

- Engineered a robust RESTful API using Node.js 18 and Express, implementing Zod for strict runtime schema validation to ensure data integrity across the commute planning pipeline.
- Streamlined cross-team integration by utilizing Axios and Zod to define clear data contracts, reducing debugging time and ensuring seamless communication between frontend and external mapping API's.
- Collaborated in an Agile environment to architect a modular backend, facilitating parallel development and peer code reviews improved overall system reliability and deployment speed.

Kdrama Recommendation Tool

Mar. 2026

- Designed and implemented a content-based recommendation system using Python, with scikit-learn (TF-IDF and cosine similarity) and pandas to analyze a 350-drama dataset and surface similar titles by genre, tags, and cast.
- Developed a web-based interface with a Flask REST API and a single-page frontend so users can search by drama name or filter by preferences (genres, tags, rating, year), with results shown in a clear, structured layout.
- Gained hands-on experience with recommendation algorithms, REST API design, and full-stack development (Python backend and HTML/CSS/JS frontend), skills relevant to building data-driven and user-facing applications.

CLUBS

Student

Sep. 2024 - Present

Oregon State University Artificial Intelligence Club, Corvallis, OR

- Applied skills in data preprocessing, exploratory analysis, feature engineering, and model building.
- Utilized tools and libraries including Python, Git, NumPy, Pandas, and Matplotlib.
- Collaborated with peers and mentors for feedback, resulting in a portfolio-ready project demonstrating practical AI competencies
